About me

The long barrow was built on
land previously inhabited in the
Mesolithic period. It consisted of
a sub-rectangular earthen
tumulus, estimated to have been
15 metres (50 feet) in length,
with a chamber built from
sarsen megaliths on its eastern
end. Both inhumed and
cremated human remains were
placed within this chamber
during the Neolithic period,
representing at least nine or ten
individuals.
